Addendum - California Battery Charger Regulation Compliance

This UPS is certified to comply with the 2013 Battery Charger System requirements found in Title 20 of the California Code of Regulations (CCR).

Testing Guidance

In order to disable as much non-battery charger functionality as possible (as required by the official test procedure), the UPS should be tested with the output powered off. Because recharge times published elsewhere are not applicable under the conditions required by the official test procedure, a recharge time of 40 hours should be used when testing.
