Important Safety Information

Read these instructions carefully and look at the equipment to become familiar with it before trying to install, operate, service or maintain it. The following safety messages may appear throughout this manual or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a “Danger” or “Warning” safety message indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages with this symbol to avoid possible injury or death.

⚠️ DANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Failure to follow these instructions will result in death or serious injury.

⚠️ WARNING

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

⚠️ CAUTION

CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

Failure to follow these instructions can result in injury or equipment damage.

⚠️ NOTICE

NOTICE is used to address practices not related to physical injury. The safety alert symbol shall not be used with this type of safety message.

Failure to follow these instructions can result in equipment damage.

Please Note

Electrical equipment should only be installed, operated, serviced, and maintained by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction, installation, and operation of electrical equipment and has received safety training to recognize and avoid the hazards involved.
Safety Precautions

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
All safety instructions in this document must be read, understood and followed.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Read all instructions in the Installation Manual before installing or working on this UPS system.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Do not install the UPS system until all construction work has been completed and the installation room has been cleaned.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
• The product must be installed according to the specifications and requirements as defined by Schneider Electric. It concerns in particular the external and internal protections (upstream breakers, battery breakers, cabling, etc.) and environmental requirements. No responsibility is assumed by Schneider Electric if these requirements are not respected.
• After the UPS system has been electrically wired, do not start up the system. Startup must only be performed by Schneider Electric.
Failure to follow these instructions will result in death or serious injury.

⚠️ DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
The UPS System must be installed according to local and national regulations. Install the UPS according to:
• IEC 60364 (including 60364–4–11 - protection against electric shock, 60364–4–41 - protection against thermal effect, and 60364–4–43 - protection against overcurrent), or
• NEC NFPA 70, or
• Canadian Electrical Code (C22.1, Part 1)
depending on which one of the standards apply in your local area.
Failure to follow these instructions will result in death or serious injury.
DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
- Install the UPS system in a temperature controlled indoor environment free of conductive contaminants and humidity.
- Install the UPS system on a non-flammable, level and solid surface (e.g. concrete) that can support the weight of the system.
Failure to follow these instructions will result in death or serious injury.

DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
The UPS is not designed for and must therefore not be installed in the following unusual operating environments:
- Damaging fumes
- Explosive mixtures of dust or gases, corrosive gases, or conductive or radiant heat from other sources
- Moisture, abrasive dust, steam or in an excessively damp environment
- Fungus, insects, vermin
- Salt-laden air or contaminated cooling refrigerant
- Pollution degree higher than 2 according to IEC 60664-1
- Exposure to abnormal vibrations, shocks, and tilting
- Exposure to direct sunlight, heat sources, or strong electromagnetic fields
Failure to follow these instructions will result in death or serious injury.

DANGER
HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH
Do not drill or cut holes for cables or conduits with the gland plates installed and do not drill or cut holes in close proximity to the UPS.
Failure to follow these instructions will result in death or serious injury.

WARNING
HAZARD OF ARC FLASH
Do not make mechanical changes to the product (including removal of cabinet parts or drilling/cutting of holes) that are not described in the Installation Manual.
Failure to follow these instructions can result in death, serious injury, or equipment damage.

WARNING
HAZARD OF OVERHEATING
Respect the space requirements around the UPS system and do not cover the product’s ventilation openings when the UPS system is in operation.
Failure to follow these instructions can result in death, serious injury, or equipment damage.
**WARNING**

HAZARD OF EQUIPMENT DAMAGE

Do not connect the UPS output to regenerative load systems including photovoltaic systems and speed drives.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

---

**Electrical Safety**

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- Electrical equipment must be installed, operated, serviced, and maintained only by qualified personnel.
- The UPS system must be installed in a room with restricted access (qualified personnel only).
- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices.
- Turn off all power supplying the UPS system before working on or inside the equipment.
- Before working on the UPS system, check for hazardous voltage between all terminals including the protective earth.
- The UPS contains an internal energy source. Hazardous voltage can be present even when disconnected from the utility/mains supply. Before installing or servicing the UPS system, ensure that the units are OFF and that utility/mains and batteries are disconnected. Wait five minutes before opening the UPS to allow the capacitors to discharge.
- A disconnection device (e.g. disconnection circuit breaker or switch) must be installed to enable isolation of the system from upstream power sources in accordance with local regulations. This disconnection device must be easily accessible and visible.
- The UPS must be properly earthed/grounded and due to a high leakage current, the earthing/grounding conductor must be connected first.

Failure to follow these instructions will result in death or serious injury.

---

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

In systems where backfeed protection is not part of the standard design, an automatic isolation device (backfeed protection option or other device meeting the requirements of IEC/EN 62040–1 or UL1778 4th Edition – depending on which of the two standards apply to your local area) must be installed to prevent hazardous voltage or energy at the input terminals of the isolation device. The device must open within 15 seconds after the upstream power supply fails and must be rated according to the specifications.

Failure to follow these instructions will result in death or serious injury.

---

When the UPS input is connected through external isolators that, when opened, isolate the neutral or when the automatic backfeed isolation is provided external to the equipment or is connected to an IT power distribution system, a label must be fitted at the UPS input terminals, and on all primary power isolators installed remote from the UPS area and on external access points between such isolators and the UPS, by the user, displaying the following text (or equivalent in a language which is acceptable in the country in which the UPS system is installed):
Battery Safety

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

Risk of Voltage Backfeed. Before working on this circuit: Isolate the UPS and check for hazardous voltage between all terminals including the protective earth.

Failure to follow these instructions will result in death or serious injury.

---

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

- Battery circuit breakers must be installed according to the specifications and requirements as defined by Schneider Electric.
- Servicing of batteries must only be performed or supervised by qualified personnel knowledgeable of batteries and the required precautions. Keep unqualified personnel away from batteries.
- Disconnect charging source prior to connecting or disconnecting battery terminals.
- Do not dispose of batteries in a fire as they can explode.
- Do not open, alter, or mutilate batteries. Released electrolyte is harmful to the skin and eyes. It may be toxic.

Failure to follow these instructions will result in death or serious injury.

---

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

Batteries can present a risk of electric shock and high short-circuit current. The following precautions must be observed when working on batteries:

- Remove watches, rings, or other metal objects.
- Use tools with insulated handles.
- Wear protective glasses, gloves and boots.
- Do not lay tools or metal parts on top of batteries.
- Disconnect the charging source prior to connecting or disconnecting battery terminals.
- Determine if the battery is inadvertently grounded. If inadvertently grounded, remove source from ground. Contact with any part of a grounded battery can result in electric shock. The likelihood of such shock can be reduced if such grounds are removed during installation and maintenance (applicable to equipment and remote battery supplies not having a grounded supply circuit).

Failure to follow these instructions will result in death or serious injury.

---

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

When replacing batteries, always replace with the same type and number of batteries or battery packs.

Failure to follow these instructions will result in death or serious injury.
**CAUTION**

**RISK OF EQUIPMENT DAMAGE**

- Wait until the system is ready to be powered up before installing batteries in the system. The time duration from battery installation until the UPS system is powered up must not exceed 72 hours or 3 days.

- Batteries must not be stored more than six months due to the requirement of recharging. If the UPS system remains de-energized for a long period, we recommend that you energize the UPS system for a period of 24 hours at least once every month. This charges the batteries, thus avoiding irreversible damage.

Failure to follow these instructions can result in injury or equipment damage.
Specifications

AC Input Specifications

</tbody>
</table>

### Heat Dissipation

<table>
<thead>
<tr>
<th>Heat Dissipation</th>
<th>50% load</th>
<th>75% load</th>
<th>100% load</th>
</tr>
</thead>
<tbody>
<tr>
<td>Batteries fully charged (BTU/hr)</td>
<td>2038</td>
<td>2946</td>
<td>4117</td>
</tr>
<tr>
<td>Batteries charging (BTU/hr)</td>
<td>4494</td>
<td>5402</td>
<td>6573</td>
</tr>
</tbody>
</table>

**NOTE:** Batteries fully charged is a continuous rating. Batteries charging is for 3 hours max. Charging losses are based on 3000 W and 95% charger electronic efficiency and 80% battery charging efficiency.

### Fuses and Breakers

**NOTE:** The UPS unit’s withstand rating is 30,000 symmetrical Amps RMS

### Protection Type and Rating

Condition: The UPS plus the following options (external to the UPS):

---

³ The following ranges can be selected: 40-60 Hz, 47-53 Hz, 49.9-50.1 Hz, 50-70 Hz, 57-63 Hz, and 59.9–60.1 Hz

⁸ May be higher at less than full load

⁹ May drop to lower values at low AC Mains

¹⁰ In normal operation at fully charged batteries
### Input Isolation Transformer

<table>
<thead>
<tr>
<th>Present</th>
<th>Protection Type</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>90 A 3–pole breaker (30 kAIC)</td>
<td>If available fault current is less than 30 kA, a lower AIC rated breaker may be used. Isolation transformer contains 90 A Class J fuse on primary. Each power module contains 2 pieces of 30 A fuse in parallel on its input.</td>
</tr>
<tr>
<td>Not present</td>
<td>90 A Class J current limiting fuse</td>
<td>Current limiting fuse is required to limit fault current through static switch. Each power module contains 2 pieces of 30 A fuse in parallel on its input.</td>
</tr>
</tbody>
</table>

### System DC Input Protection

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

For third party external battery solutions, it is mandatory to install an external MCCB supplied by Schneider Electric containing two 100 A DC breakers for battery isolation.

Failure to follow these instructions will result in death or serious injury.

### Wiring

<table>
<thead>
<tr>
<th>Phase conductor size</th>
<th>Terminal lug diameter</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mains input</td>
<td>3 AWG THHN</td>
<td>Saddle clamp- not stud</td>
</tr>
<tr>
<td>DC input</td>
<td>1/0 AWG</td>
<td>8 mm</td>
</tr>
</tbody>
</table>

Recommended PE conductor size is 4 AWG. The PE lug diameter is 0.250 in (8 mm).

### Wraparound Bypass Configuration / Rating

<table>
<thead>
<tr>
<th>Q1</th>
<th>3 Pole 100 A 80% rated breaker</th>
</tr>
</thead>
<tbody>
<tr>

Mechanical Assembly

1. In installations with modular battery cabinet(s): Prepare Modular Battery Cabinet for Installation (Option), page 21 – Choose the appropriate procedure for your installation.
2. Connect the Input Power Cables, page 25 – Top or bottom cable entry.
3. Connect the Output Power Cables in the PDU, page 29
5. In installations with modular battery cabinets: Connect Battery Cables in the UPS (Option), page 32.
7. In installations with modular battery cabinets: Install Modular Battery Cabinet (Option), page 39.
8. Level all cabinets with the leveling feet and a bubble level.

Product Overview

Front View of the UPS Cabinet

A. Power cables
B. Main input gland plate
C. Wiring access cover
D. Display interface
Front View of the UPS Cabinet

A. 42–position circuit breaker panel
B. Intelligence modules
C. Power modules
D. Modular batteries
E. Static switch module
F. DC Disconnect breaker
G. System enable switch
Rear View of the UPS Cabinet

A. Maintenance bypass panel access
B. Input terminal access (for top cable entry)
C. PDU shielding troughs
D. Maintenance bypass breakers
E. Floor access cover to input terminals (for bottom cable entry – sold as an option), battery terminals, and communication wiring routing (if applicable)
Front View of the UPS Cabinet

A. DC disconnect breaker  
B. System enable switch  
C. Display/computer interface card  
D. System power supply cards  
E. Slots for accessory cards  
F. Network management card  
G. External switchgear monitoring card  
H. Battery monitoring card  
I. XR communications card (for external modular battery cabinets)

Clearance

**NOTE:** Clearance dimensions are published for airflow and service access only. Consult with the local safety codes and standards for additional requirements in your local area.
Level the Cabinets

⚠️ WARNING

TIP HAZARD

The system must be installed on a level floor. The leveling feet will stabilize the cabinet, but will not compensate for a badly sloped floor.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

1. Use a screwdriver to lower the four leveling feet
2. Use a wrench to adjust the four leveling feet and ensure that the cabinet is level.

⚠️ WARNING

TIP HAZARD

Do not move the cabinet after the leveling feet have been lowered.

Failure to follow these instructions can result in death, serious injury, or equipment damage.
Prepare Modular Battery Cabinet for Installation (Option)

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

Before working on the modular battery cabinet:

- Pull all modular battery units out to the red disconnect line (but not further unless the modular battery units are removed completely from the cabinet).
- Set all DC disconnect breakers or switches to the OFF position.
- Set the utility/mains power to OFF or LOCKED OUT position – in dual mains supply systems, ensure that both sources are in the OFF or LOCKED OUT position.

Failure to follow these instructions will result in death or serious injury.

Rearrange Side Panels for Line-Up and Match Modular Battery Cabinets

1. Remove the solid side panel on the UPS cabinet on the side facing towards the line-up and match modular cabinet(s).

**DANGER**

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

Remove and reinstall the PE cable connected to the cabinet side panels when rearranging the side panels. Use a 13 mm wrench.

Failure to follow these instructions will result in death or serious injury.
2. Remove the side panel with knockouts on the modular battery cabinet facing away from the UPS/other modular battery cabinet(s).

**Removal of the Side Panel**

3. Install the solid side panel on the modular battery cabinet.

4. Remove the needed knockouts on the side panel with knockouts and install the cable routing hardware (chase nipple, locking nut and cable bushing) and install it on the UPS cabinet.

5. Remove the side panels on the other modular battery cabinets, remove the needed knockouts, install the cable routing hardware and reinstall the side panels. Use the stabilizing feet to adjust for aligning the cabinets, if necessary.

Communication cables and battery cables can now be routed through the knockouts in the modular battery cabinets.

**Prepare for Cables in a Bottom Cable Entry System**

1. Loosen the screws to remove the plate.
2. Punch holes as required and reinstall the plate before mounting the wiring hardware.

**Rear View**

---

**Prepare for Cables in a Rear Cable Entry System**

1. Loosen the screws to remove the plate.
2. Punch holes as required and reinstall the plate before mounting the wiring hardware.

Rear View of UPS
Connect the Input Power Cables

**DANGER**

HAZARD OF ELECTRICAL SHOCK, EXPLOSION, OR ARC FLASH

A 90 A circuit breaker with a shunt trip must be installed to protect the system against over-current from the utility source.

**Failure to follow these instructions will result in death or serious injury.**

1. Install a 90 A input utility circuit breaker with a shunt trip upstream of the UPS.

2. 
   - **Top access system:** Remove the main input gland plate by loosening the screws in the roof of the cabinet.

     **Top Front View of the UPS Cabinet**

     ![Top Front View of the UPS Cabinet](image)

   - **Bottom access system:** Remove the floor access cover in the rear of the cabinet and through this remove the input gland plate in the floor of the cabinet.

     **Bottom Rear View of the UPS Cabinet**

     ![Bottom Rear View of the UPS Cabinet](image)

3. Knock out the perforated hole in the gland plate for the conduit.

   **NOTE:** In systems with remote modular battery cabinet(s), drill an extra hole for a conduit for the battery cables in the bottom gland plate.
4. Install a lock-nut and bushing to the conduit.

5. Reinstall the input gland plate and thread the conduit through the hole in the gland plate.
6.  

- **Top access system**: Remove the main input access panel to get access to the input terminals.

  Top Access – Rear View of the Cabinet

- **Bottom access system**: Access to the bottom input terminals is through the floor access panel (already removed).

  Bottom Access – Rear View of the Cabinet
7. Run the input cables (L1, L2, L2 and N) and the PE cable from the main utility source through the conduit to the input terminals (top or bottom of the cabinet) and connect the cables according to the labels on the terminals.

**Input Terminals – Access in the Top of the Cabinet**

**Input Terminals – Access in the Bottom of the Cabinet**

**NOTE:** Torque L1, L2 and L3 terminal lugs to 24.6–26.1 in-lb and torque the PE lug to 124 in-lb
Connect the Output Power Cables in the PDU

1. Remove the circuit breaker panel cover by loosening the captive screws at each corner of the cover and pull it off.

   Rear View of the UPS Cabinet

2. On the circuit breaker panel, snap and bolt the breaker into a position on the panel.

3. Remove the corresponding plastic blanking plate on the panel cover and reattach the panel cover to the cabinet.
4. Remove the wiring access cover on top of the cabinet.

5. Install a strain relief connector in any available knockout on the cabinet roof.

6. Slide enough of the output power cable through the strain relief connector to reach the new circuit breaker.

7. Tighten the strain relief connector.

8. Through the wiring access cover there is access to the rear side of the breaker panel. Secure the output power cable here with the wire ties on the back of the breaker panel.

9. Connect the neutral cable to the closest open termination point on the neutral bar.

10. Connect the ground cable to the closest open termination point on the ground bar.
11. Route the output cables (L1, L2, L3) over (shown) or under the rear of the panel.

12. At the front of the panel, connect the output cables (L1, L2, L3) to the circuit breaker(s).

**NOTE:** In the illustration, three-pole breakers are shown, but single-pole breakers can also be connected.
Connect Battery Cables in the UPS (Option)

**NOTE**: Up to four modular battery cabinets can be connected to the UPS.

1. Remove the floor access cover in the rear of the cabinet and route the battery cables through the bottom gland plate for remote modular battery cabinet(s) or through the knockout in the UPS side panel for line-up and match modular battery cabinets(s).
2. Connect the battery cables (+, - and CT) to the DC input terminals in the UPS.

**Power Terminals**

**NOTE**: Torque L1, L2 and L3 terminal lugs to 24.6–26.1 in-lb and torque the PE lug to 124 in-lb
Connect Emergency Power Off (EPO)

**NOTE:** EPO wiring: CL2 or other extra-low voltage wiring in accordance with local electrical codes.

**NOTE:** If you choose to use a 24 VAC, 24 VDC or contact closure connection to the EPO, use one of the following UL-listed wire types:

**For installations in the US:**
- CL2 Class 2 cable for general purpose use
- CL2P Plenum cable for use in ducts, plenums, and other space used for environmental air
- CL2R Riser cable for use in vertical run shaft from floor to floor
- CL2X Limited Use cable for use in dwellings and raceways

**For installation in Canada:**
- CSA-certified, type ELC (Extra-Low-Voltage Control Cable)

**NOTE:** If you do not use a CL2 cable, route the EPO wiring in conduit that does not contain any branch circuit wiring.

1. Route the EPO cable separately from the power cables through a separate conduit through an available cable exit point depending on your installation.
2. Connect a normally open (NO) or a normally closed (NC) EPO switch to the board in the UPS.

Rear View of UPS Cabinet

Normally Open (NO) EPO control
- J5
  - 4: Ground
  - 3: Relay Coil 1
  - 2: Internal Power +24V Supply

To EPO switch

Normally Closed (NC) EPO control
- J4
  - 8: Ground
  - 7/6: Relay Coil 2
  - 5: Internal Power +24V Supply
EPO Wiring Options

A. Dry Normally Open contacts
B. +24V Normally Open (remove jumper)
C. Dry Normally Closed contacts (remove jumper)
D. +24V Normally Closed (remove jumper)
DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

Ensure total power off before removing the side panel.

Failure to follow these instructions will result in death or serious injury.

NOTE: Use 20–foot standard Cat data cable (supplied). If the cable length is inadequate, a longer Cat 5 cable, or couplers, can be used (not supplied).

NOTE: If bottom cable entry is required, follow steps 1 to 5 below to gain access to the communication cables. If not, proceed to step 6.

Front View of UPS

1. Unlock the right-side panel using the key.
2. Depress the latches.
3. Pull out the panel.
4. Lift the panel at an angle away from the cabinet.
5. Route the communication cables through the front holes of the cabinets. Exit the cabinets from the bottom or top as required.
6. Connect the network communication cable.

Front View of UPS
7. **Only in installations with modular battery cabinets:** Route the communication cable from XR Communications port 2 in the first modular battery cabinet to the UPS XR Communications port 1 (for remote modular battery cabinets the length of the signal must not exceed 50 m). The side panel of the modular battery cabinet is removed for cable wiring as in steps 1–5.

**Front View of Modular Battery Cabinet**

8. **Only in installations with modular battery cabinets:** Route the communication cable from XR Communications port 1 in each modular battery cabinet to XR Communications port 2 in the next modular battery cabinet. Remove the terminator when necessary. Insert the terminator from the cable into the unused communication port on the last modular battery cabinet.

9. Reinstall and lock the side panels on the cabinets after finishing cable routing.
Install Modular Battery Cabinet (Option)

Connect Battery Cables in Modular Battery Cabinet

**NOTE:** Power terminal lug diameter: 8 mm. Torque power terminal lugs to 53 lb-in (6 Nm).

**NOTE:** PE and power cables provided with the modular battery cabinet are only for internal cable routing through the side panels — not for cable routing through external conduits.

1. Connect the modular battery cabinet to the PE stud in the UPS cabinet.
2. Connect the battery cables (+, - and CT) from the UPS to the DC output terminals in the modular battery cabinet.

### Modular Battery Cabinet

![Diagram of Modular Battery Cabinet](image)

**NOTE:** For remote modular battery cabinets, the length of the signal and power cables must not exceed 50 m for the cable that connects the modular battery cabinet to the UPS.

Connect the Battery Cables between the Modular Battery Cabinets
1. Connect the battery cables from the DC output terminals in modular battery cabinet 2 to the DC input terminals in modular battery cabinet 1.

Modular Battery Cabinet 1

2. Repeat for modular battery cabinet 3 and 4, if applicable.

3. Connect the PE cable from the UPS to the modular battery cabinet (closest to the UPS).
4. Route the PE cable from modular battery cabinet to modular battery cabinet through the bottom, rear or side depending on chosen cable entry.

5. Place the cabinet address on the front of each modular battery cabinet (1 for modular battery cabinet 1, 2 for modular battery cabinet number 2 etc.).
